

THE RETINA

BEING VISIONARY REQUIRES SOMETHING SPECIAL ...

YOUR RETINA's light-sensitive cells receive visual information and send it through your optic nerve to the brain resulting in sight! Retinal disease can steal your vision. But if you know the risk factors, it doesn't have to. **GET A DILATED RETINA EXAM.** If you have any of the symptoms below, **SEE A RETINA SPECIALIST** immediately. The advanced therapies retina specialists offer may save your sight and even improve it. The sooner you act, the more vision — and independence — you can preserve. **Recognize the risk. Seek early treatment. Save your sight.**

Normal vision

Impaired vision may include:

- central vision loss
- wavy lines
- blurriness
- floaters
- reduced color perception
- other symptoms
